Scabies is an infestation produced by a mite, *Sarcoptes scabiei*, which seems to have a unique predisposition to infect only human skin. After an incubation period of about three weeks, the patient develops an allergic contact dermatitis to the mite and forms very itchy red vesicles that seem to be most common in the webs of the fingers and in the groin.

A. EXECUTIVE SUMMARY. Updated US consensus guidelines for management of cervical screening abnormalities are needed to accommodate the 3 available cervical screening strategies: primary human papillomavirus (HPV) screening, cotesting with HPV testing and cervical cytology, and cervical cytology alone. New data indicate that a patient's risk of developing cervical precancer or cancer can be ...
